

AMENDMENTS TO THE CLAIMS

Please **AMEND** claim 19 as shown below.

The following is a complete list of all claims in this application.

1-18 (Canceled).

19. (Currently Amended) An active matrix display device, comprising:
an insulation substrate;
a thin film transistor formed on the insulation substrate, including a semiconductor layer
where source/drain regions are formed, gate electrode and source/drain electrodes respectively
connected to the source/drain regions;
an insulation film formed over the insulation substrate, having an opening portion; and
a pixel electrode as a lower electrode,
wherein the source/drain electrodes have a dual-layered structure of a transparent
conductive layer and a metal layer, the metal layer being enclosed by the insulation film and
formed on the transparent layer,
wherein the metal layer and the insulation film are etched for exposing a portion of the
transparent conductive layer forming any one of the source/drain electrodes, and
wherein the pixel electrode extends from the a-portion of the transparent conductive
layer forming any one of the source/drain electrodes and is exposed through the opening
portion of the insulation film.

20. (Previously Presented) The active matrix display device according to claim 19, wherein the insulation film is a passivation layer patterned to cover the metal layer of the source/drain electrodes.

21. (Previously Presented) The active matrix display device according to claim 19, wherein the insulation film is a passivation layer reflowed to enclose the metal layer of the source/drain electrodes.

22. (Previously Presented) The active matrix display device according to claim 19, further comprising an organic EL layer formed on a portion of the pixel electrode exposed through the opening portion, wherein the organic EL layer is insulated from the metal layer of the source/drain electrodes.
